1.2 The consultants are invited to submit a Technical Proposal and a Financial Proposal, as specified in the Data Sheet (the Proposal) for consulting services required for the Assignment named in the Data Sheet. The Proposal will be the basis for contract negotiations and ultimately for a signed contract with the selected Consultant.

1.3 The Assignment shall be implemented in accordance with the phasing indicated in the Data Sheet. When the Assignment includes several phases, the performance of the consultant under each phase must be to the client's satisfaction before work begins on the next phase.

1.4 The Consultants must familiarize themselves with local conditions and take them into account in preparing their Proposals. To obtain first-hand information on the Assignment and on the local conditions, consultants are encouraged to pay a visit to the Client before submitting a Proposal, and to attend a pre-proposal conference if one is specified in the Data Sheet. Attending the pre-proposal conference is optional. The Consultant's representative should contact the officials named in the Data Sheet to arrange for their visit or to obtain additional information on the pre-proposal conference. Consultants should ensure that these officials are advised of the visit in adequate time to allow them to make appropriate arrangements.

1.5 The Client will provide the inputs specified in the Data Sheet, assist the firm in obtaining licenses and permits needed to carry out the services, and make available relevant project data and reports.

1.6 Please note that (i) the costs of preparing the proposal and of negotiating the contract, including a visit to the Client, are not reimbursable as a direct cost of the Assignment; and (ii) the Client is not bound to accept any of the Proposals submitted.

1.7 Bangalore South City Corporation (BSCC) expects consultants to provide professional, objective, and impartial advice and at all times hold the Client's interest paramount, without any consideration for future work, and strictly avoid conflicts with other assignments or their own corporate interests. Consultants shall not be hired for any assignment that would be in conflict with their prior or current obligations to other clients, or that may place them in a position of not being able to carry out the assignment in the best interest of the Client.

1.7.1 Without limitation on the generality of this rule, consultants shall not be hired under the circumstances set forth below:

(a) A firm which has been engaged by the Client to provide goods or works for a project, and any of their affiliates, shall be disqualified from providing consulting services for the same project. (b) Consultants or any of their affiliates shall not be hired for any assignment which, by its nature, may be in conflict with another assignment of the consultants.

1.7.2 As pointed out in para. 1.7.1 (a) above, consultants may be hired for downstream work, when continuity is essential, in which case this possibility shall be indicated in the Data Sheet and the factors used for the selection of the consultant should take the likelihood of continuation into account. It will be the exclusive decision of the Client whether or not to have the downstream assignment carried out, and if it is carried out, which consultant will be hired for the purpose.

(b) will reject a proposal for award if it determines that the firm recommended for award has engaged in corrupt or fraudulent activities in competing for the contract in question;

(d) will declare a firm ineligible, either indefinitely or for a stated period, to be awarded a BSCC-financed contract if it at any time determines that the firm has engaged in corrupt or fraudulent practices in competing for, or executing a BSCC-financed contract; and

TERMS OF REFERENCE (TOR)

5.1 BACKGROUND

Bangalore South City Corporation (BSCC), hereinafter referred to as "the Client", intends to undertake a Feasibility Study for Development of Grade-Separated Interchange (Flyover-cum-Underpass) at Vega City Mall Junction on Bannerghatta Main Road, Bengaluru.

The junction is one of the critical traffic bottlenecks in South Bengaluru with high traffic volume, commercial activity, and upcoming metro integration. The Client desires to engage a Consultancy Firm to carry out a comprehensive feasibility study including traffic analysis, surveys, preliminary design, and economic evaluation to develop a signal-free interchange solution.

5.1.1 OBJECTIVES AND DESCRIPTION OF SERVICES

a. The primary objective of hiring a Consultant is to assess the technical, traffic, economic, and environmental feasibility of constructing a grade-separated interchange at the identified junction.

b. The Consultant shall carry out detailed traffic studies, including volume count, turning movement, origin-destination surveys, and travel time analysis to evaluate existing and future traffic conditions.

c. To identify traffic congestion issues, delays, safety concerns, and bottlenecks and propose suitable engineering solutions.

d. To evaluate various interchange alternatives (flyover, underpass, rotary improvement, signal optimization, etc.) and recommend the most suitable option.

e. To prepare conceptual geometric designs and preliminary drawings for the proposed interchange.

f. To assess Right of Way (ROW), land acquisition requirements, and encroachments.

g. To identify and assess existing utilities (BWSSB, BESCOM, OFC, drainage, etc.) and propose utility shifting plans.

h. To carry out topographical surveys, traffic surveys, and preliminary geotechnical investigations required for feasibility.

i. To evaluate integration with existing and proposed metro infrastructure and pedestrian facilities.

j. To assess drainage conditions and flood risks, especially for underpass feasibility.

k. To prepare preliminary cost estimates including civil works, utility shifting, and land acquisition.

l. To carry out economic analysis including vehicle operating cost (VOC), travel time savings, and cost-benefit analysis.

m. To assess environmental and social impacts and propose mitigation measures.

n. To propose phasing and traffic management plan during construction.

o. To identify risks and propose mitigation strategies.

p. To submit Feasibility Report with recommendations for further DPR preparation**.**

5.1.2 BROAD SCOPE OF WORK

The Consultant's Scope of Services shall consist of the following:

5.1.2.1 Feasibility Study Stage

a. Carry out reconnaissance survey and data collection of the project corridor and junction.

A detailed site reconnaissance shall be undertaken to understand the existing physical and operational conditions of the project area. This includes identification of road geometry, junction configuration, traffic movement patterns, adjacent land use, encroachments, access points, and critical constraints. Relevant secondary data such as previous studies, traffic records, satellite imagery, and planning documents shall also be collected to establish a baseline for analysis.

b. Conduct topographical survey using Total Station/Drone survey including all physical features.

A comprehensive topographical survey shall be carried out using Total Station and/or equivalent techniques to capture accurate ground levels and spatial features. The survey shall include road edges, medians, footpaths, drains, utilities, trees, buildings, and other permanent/temporary features. The data will be used for preparation of base maps, contour plans, and to support geometric and structural design.

c. Carry out traffic surveys, including:

- **Classified Traffic Volume Count (24-hour)**
  Traffic volume counts shall be conducted continuously for 24 hours to capture variations across peak and off-peak periods. Vehicles shall be classified into categories such as two-wheelers, cars, buses, LCVs, and HCVs to understand traffic composition and load characteristics.

- **Turning Movement Count (TMC)**
  Turning movement surveys shall be conducted at the junction to capture directional flow of traffic (left, right, straight movements) during peak hours. This data is essential for junction capacity analysis and interchange design.
- **Origin-Destination (O-D) Survey**
  O-D surveys shall be carried out using roadside interviews, number plate matching, or GPS-based methods to identify travel patterns, trip lengths, and route choices of road users, which are critical for traffic modelling.
- **Speed and Delay Study**
  Speed and delay studies shall be conducted using moving car method or GPS tracking to assess travel time, average speed, delays, and causes of congestion along the corridor.

d. Analyse Traffic data shall be analyzed to determine the existing capacity and Level of Service

(LOS) of the corridor and junction using IRC/HCM guidelines. Future traffic projections shall be developed for a design horizon of 20–30 years considering growth rates, land use changes, and upcoming infrastructure projects such as metro corridors.ze traffic capacity, LOS, and future projections (20–30 years).

e. Identify problem areas and bottlenecks in existing conditions.

Based on traffic analysis and field observations, critical issues such as congestion points, conflict zones, accident-prone locations, inadequate geometry, and inefficient signal operations shall be identified and documented.

f. **Develop and analyze multiple design alternatives.**

Various engineering solutions such as flyover, underpass, rotary improvement, grade separators, or signal optimization shall be developed. Each alternative shall be evaluated based on traffic performance, feasibility, cost, land requirements, and constructability.

g. Prepare conceptual layout plans and geometric designs.

Conceptual drawings including plan, profile, cross-sections, and junction layouts shall be prepared in accordance with IRC/MoRTH standards. These designs will define lane configurations, turning radii, gradients, and alignment of proposed structures.

h. Conduct preliminary geotechnical investigations including soil testing.

Initial geotechnical investigations shall be carried out through boreholes and laboratory testing to assess soil strata, bearing capacity, groundwater conditions, and suitability for foundations of flyover/underpass structures.

i. Identify existing utilities and prepare shifting/diversion plans.

All existing utilities such as water pipelines (BWSSB), electrical lines (BESCOM), sewer lines, OFC cables, and stormwater drains shall be mapped. Preliminary utility shifting or protection plans shall be developed to avoid conflicts during construction.

j. Study drainage patterns and stormwater management requirements.

Existing drainage systems shall be analyzed to understand flow patterns, flooding risks, and outfall conditions. Suitable stormwater management measures, especially for underpasses, shall be proposed to prevent waterlogging.

k. Assess land acquisition requirements and constraints.

Assessment of Right of Way (ROW), required additional land, encroachments, and impact on adjacent properties shall be carried out. Constraints such as built-up areas, religious structures, and commercial establishments shall be identified.

l. Prepare preliminary structural concepts for flyover/underpass.

Conceptual structural configurations including span arrangement, superstructure type, substructure elements, and foundation systems shall be developed based on site conditions and design requirements.

m. Estimate project cost (civil + LA + utilities + contingencies).

A preliminary cost estimate shall be prepared covering civil works, land acquisition, utility shifting, environmental mitigation, and contingencies. Standard Schedule of Rates (SoR) and market rates shall be adopted.

n. Carry out economic.

Economic evaluation shall be performed considering benefits such as travel time savings, vehicle operating cost (VOC) reduction, and accident reduction.

o. Prepare construction methodology and traffic diversion plan.

A practical construction sequence shall be developed considering site constraints. Traffic diversion and management plans shall be proposed to ensure minimal disruption during construction.

p. Identify risks and mitigation measures.

Potential risks related to design, construction, environment, utilities, and stakeholder issues shall be identified. Appropriate mitigation strategies shall be proposed to minimize project uncertainties.

q. Submit Draft Feasibility Report and incorporate comments.

A comprehensive draft report covering all analyses, findings, and proposed solutions shall be submitted to the Client for review, and comments shall be incorporated.
